This cDNA sequence codes for human beta-2-adrenergic receptor (see AAW75777) having an arginine residue at position 16. A novel methofor identifying individuals susceptible to adverse responses to regular administration of beta-agonists comprises: (a) identifying in a genomic nucleic acid sample from the individual first and second alleles of the beta 2-adrenergic receptor gene, and (b) classifying an individual as susceptible if first and second alleles both encode Arg at residue 16 of the beta 2-adrenergic receptor gene alleles may be identified by any known method e.g. denaturing gel electrophoresis or PCR amplification (see also AAV52615-17). Identification
                                                                                                                                                                                 Disclosure; Page 33-35; 46pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           preferably comprises amplifying a portion of each allele which includes the sequence encoding residue 16, and optionally also comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known polymorphism in the beta 2-adrenergic receptor gene as being linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens.

The products of the invention are used in a method to determine a predisposition for high blood pressure as well as for abnormal blood pressure and other cardiovascular diseases, including myocardial infarction and stroke. Other conditions that can be determined include neuropsychiatric disease, such as depression, anxiety attention deficit disorder with hyperactivity, eating disorders, e.g.
                                                                                                                                 Beta 2-adrenergic receptor; human; hypotensive; cardiant; stroke;
                                                                                                                                                                                                       Human beta 2-adrenergic receptor wild type DNA.
                                                                                                                                                                                                                                                                                07-OCT-1999

```
CC pattern obtained from a population of individuals exhibiting a predetermined cardiovascular disease status. The polymorphic markers are CC useful for determining the predisposition of an individual to cardiovascular disorders such as myocardial infarction, unstable angina, the predistring the likely cardiovascular status of a patient given a treatment regimen comprising administration of cardiovascular drugs (e.g., ACE inhibitors, beta-adrenergic receptor antagonists (beta-cc provides a basis for predicting the outcome of a treatment regimen. CC provides a basis for predicting the outcome of a treatment regimen. CC primers and probes for detecting a polymorphic site may be used as CC library arrays for high throughput screening. The genes, and the proteins CC drugs. Determination of an individual spolymorphic pattern reduces or calcium channel arror in selecting a treatment for a particular CC eliminates trial and error in selecting a treatment for a particular CC eliminates trial and error in selecting a treatment for a particular CC eliminate patients from clinical trials who are predicted to be non-responsive, or at a risk for an adverse response, to a particular CC identify polymorphic pattern so that the adverse results can be evaluated to correlated with a sub-nomination of that the adverse results can be

                                                                                                                                                                                                                                                                                                                   correlated with a sub-population of the test population, permitting exclusion of such sub-populations from the treatment group. Beneficial drugs can be approved for use in the appropriate population, thereby decreasing the number of patients required for a clinical trial, which in turn decreases the duration and cost of such trials. The present sequence represents the human beta-adrenergic receptor 2 gene regulatory region (GenBank M15169, J02728, M16106). The polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    genes encoding angiotensin-converting enzyme (ACE), angiotensin II receptor type I (ATI) and type 2 (AT2), angiotensinogen (AGT), renin, aldosterone synthase, endothelin receptor type A and beta-adrenergic receptors 1 and 2. The method comprises determining the sequence at to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or more polymorphic positions within these genes, and comparing the pattern of polymorphisms from the individual with a reference polymorphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel method of assessing the cardiovascular status in an individual and to newly identified polymorphisms in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Assessing cardiovascular status in humans involves comparing test polymorphic pattern comprising polymorphic positions within genes encoding specific proteins, with reference polymorphic pattern -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to polymorphisms and haplotypes of the human beta2-adrenergic receptor (beta2-AR) gene located on chromosome 5931-32, and methods for haplotyping and/or genotyping the beta2AR gene in an individual. The methods of the invention make use of allele-specific oligonucleotides (ASOs) as probes and primers for detecting the beta2AR gene polymorphisms. The beta2AR gene polymorphisms are useful in studying the expression and biological function of beta2AR, and for develoning driver transition of beta2AR, send for develoning driver transition of beta2AR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
              Polymorphisms in the leader cistron (LC) of the beta 2-adrenergic receptor (beta 2 AR), useful for predicting genetic disposition to a disease modified by beta 2 AR expression e.g. congestive heart failure.
                                                                                                                                                              P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chromosome 5q31(12); disease predisposition; asthma; hypertension; congestive heart failure; ischemic heart disease; arrhythmia; obesity; diabetes; vascular disease; premature labour; migraine; anaphylaxis; chronic obstructive pulmonary disease; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polymorphism is found in the 5' leader sequence, which encodes a peptide which regulates expression of the beta2AR gene. The polymorphism is thought to affect individuals' responses to beta-angonists and beta-antagonists, and is likely to influence their predisposition to astima, hypertension, congestive heart failure, ischemic heart disease, arrhythmia, obesity, diabetes, vascular disease, premature labour, migraine, anaphylaxis and chronic obstructive pulmonary disease (COPD). The gene can, therefore, be used to predict the susceptibility of an individual to these diseases and determine the best treatment.
                                                                                                                                                                                                                                                                                                                                       (UYCI-) UNIV CINCINNATI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human beta2 adrenergic receptor beta2AR gene fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              05-OCT-2000 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAA38785 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          which is located on chromosome 5q31 (12). The gene has two different alleles, and it has been shown that the presence of two copies of the T allele leads to higher expression of the gene. This is because the polymorphism is found in the 5' leader sequence, which encodes a peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 20 BP; 0 A; 10 C; 7 G; 3 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  receptor (beta 2 AR), useful for predicting genetic disposition to a disease modified by beta 2 AR expression e.g. congestive heart failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is an allele-specific oligonucleotide primer for the T allele of the human beta2 adrenergic receptor (beta2AR) gene,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 8; Page 11; 56pp; English.

             This sequence represents the human beta2-adrenergic receptor gene, and is amplified by the primers of the invention. The primers are non-self hybridising; contain at least 15 nucleotides (nt) and has a melting temperature 50-85 deg. C. Each pair of primers is: non-cross-hybridising; anneals to two distinct segments (separated by at least 400 nt); and generates a homogeneous population of gene segments in a polymerase chain reaction (PCR). At least one primer in the pair can extend a 3'-end

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence, which encodes a peptide which regulates expression of the beta2AR gene. The polymorphism is thought to affect individuals' responses to beta-agonists and beta-antagonists, and is likely to influence their predisposition to asthma, hypertension, congestive heart failure, isohemic heart disease, arrhythmia, obesity, diabetes, vascular disease, premature labour, migraine, anaphylaxis and chronic obstructive pulmonary disease (COPD). The gene can, therefore, be used to predict the susceptibility of an individual to these diseases and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a fragment of the T allele of the human beta2 adrenergic receptor (beta2AR) gene, which is located on chromosome 5931 (12). The gene has two different allele, and it has been shown that the presence of two copies of the T allele leads to higher expression of the gene. This is because the polymorphism is found in the 5' leader
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            determine the best treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         variations for diagnosis of disease. Specifically variations in the alphalb gene are associated with cardiovascular disease, hypertension and prostatic disease (hypertrophy), and those in the beta2 gene with cardiovascular disease, hypertension and asthma, but variations may also be associated with peripheral vascular, pulmonary, neuropsychic and endocrine-metabolic disorders. These primers allow rapid and specific amplification of large and homogeneous gene segments of the alphalb and beta2 genes from a complex mixture of DNAs. This makes possible detection
                                                                                                                                                                                                             polymorphic pattern comprising polymorphic positions within genes encoding specific proteins, with reference polymorphic pattern

                                                                                                                                                                                                                                              CC primers and probes for detecting genetic polymorphisms or in molecular CC library arrays for high throughput screening. The genes, and the proteins CC they encode are useful in the screening of potential cardiovascular CC drugs. Determination of an individual's polymorphic pattern reduces or CC eliminates trial and error in selecting a treatment for a particular CC individual cardiovascular patient. It also provides the ability to CC eliminate patients from clinical trials who are predicted to be CC conformed to the conformation of the treatment regimen. Adverse results in an early trial can be evaluated to CC identify polymorphic patterns so that the adverse results can be CC correlated with a sub-population of the test population, permitting CC exclusion of such sub-populations from the treatment group. Beneficial CC drugs can be approved for use in the appropriate population, thereby CC decreasing the number of patterns required for a clinical trial, which in CC sequence represents the human beta -adrenceryic receptor 2 gene CC coding region (GenBank Y00106,9293708). The polymorphic sites identified CC are 839A/G, 878C/G, 1045A/G, 1284C/T, 1316A/C, 1846C/G, 2032A/G, 2032A/G,

They are also useful for predicting the likely cardiovascular status of a patient given a treatment regimen comprising administration of cardiovascular drugs (e.g., ACE inhibitors, beta-adrenergic receptor antagonists (beta-blockers) or calcium channel blockers). One or more polymorphic markers provides a basis for predicting the outcome of a treatment regimen. Fragments of the genes comprising a polymorphic site may be used as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Young, G., Zainoun, J., Zimmer, A. and Zody, M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This record contains 36 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Low-pass sequence sampling is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            However, it should not be assumed that this clone will be sequenced to completion. In the event that
